Figures S1 to S6

Tables S1 to S7

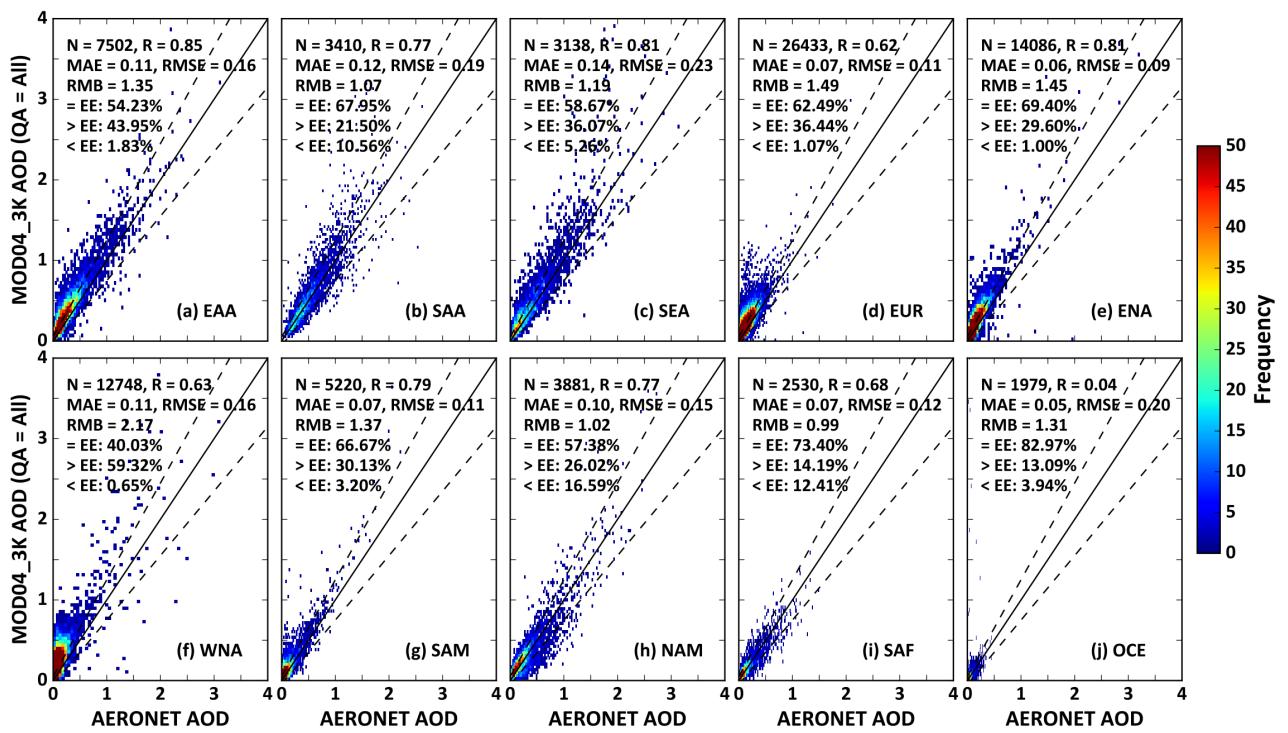

Figure S1. Validation of MOD04_3K all-quality (QA=All) AOD retrievals as a function of AERONET AODs for each region of interest from 2013 to 2017.

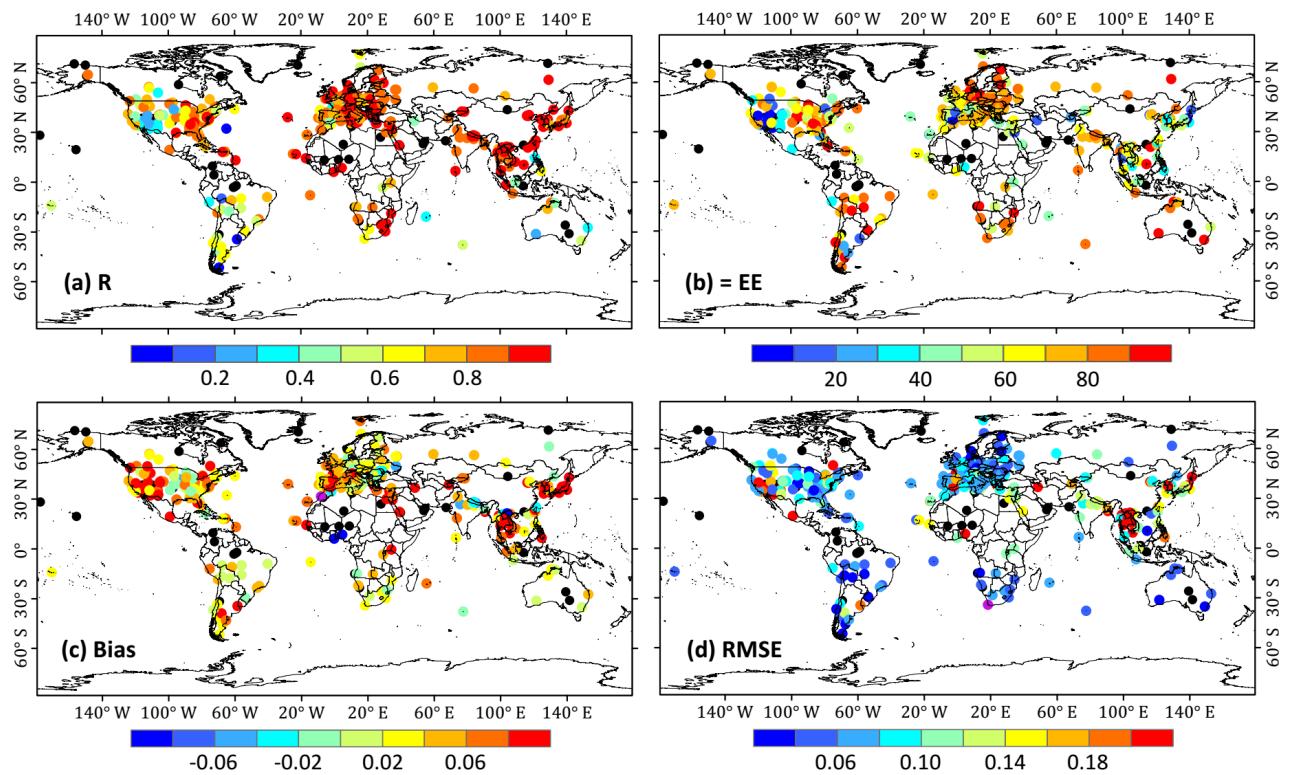

Figure S2. Validation parameters: (a) correlation coefficient (R), (b) percentage of retrievals falling within the expected error envelope (= EE), (c) mean bias, and (d) root-mean-square error (RMSE) at each AERONET station based on scatter plots of MODIS-retrieved 3-km AODs as a function of AERONET-retrieved mean AODs from the spatiotemporally collocated data set. Data are from March, April, and May (MAM) of 2013–2017. Only the MODIS/Terra 3-km best-quality ($QA = 3$) AOD product is used. Black dots show those sites with no or too few AOD retrievals.

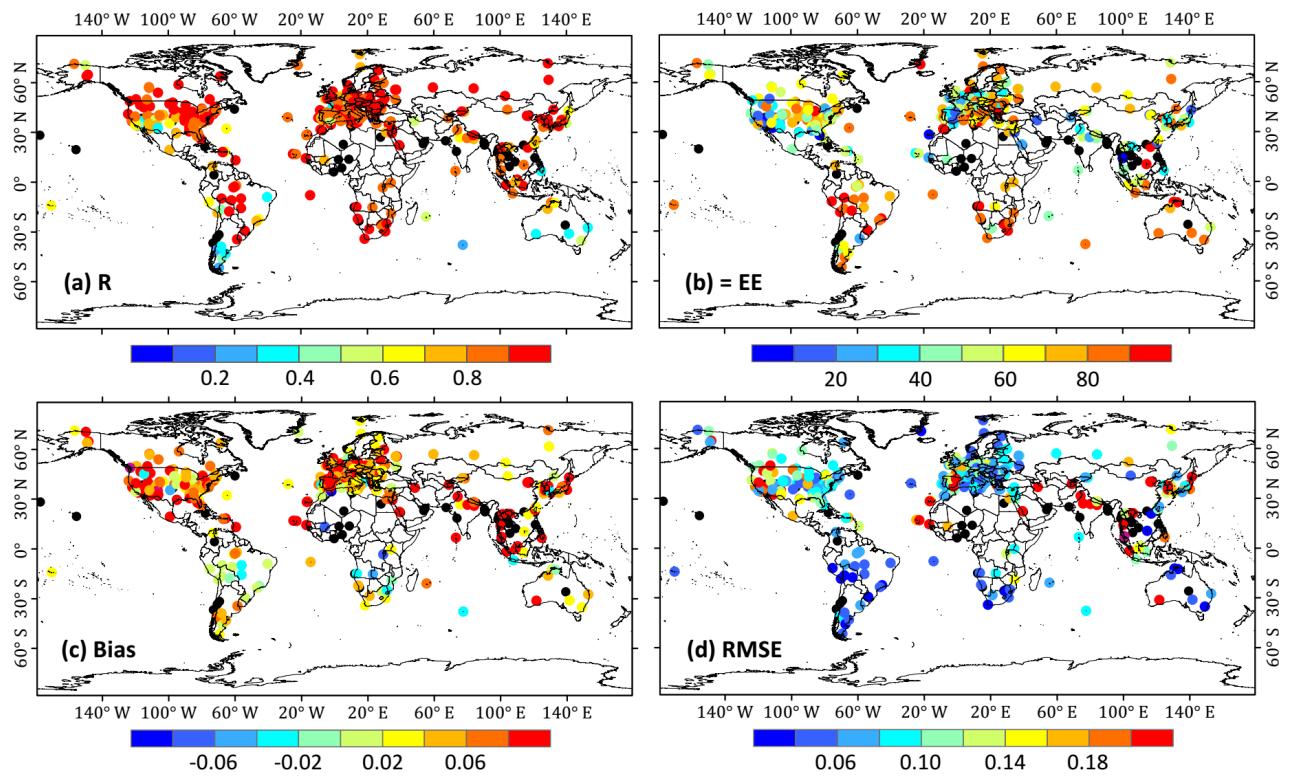

Figure S3. Same as Figure S3 but for data from June, July, and August (JJA) of 2013–2017.

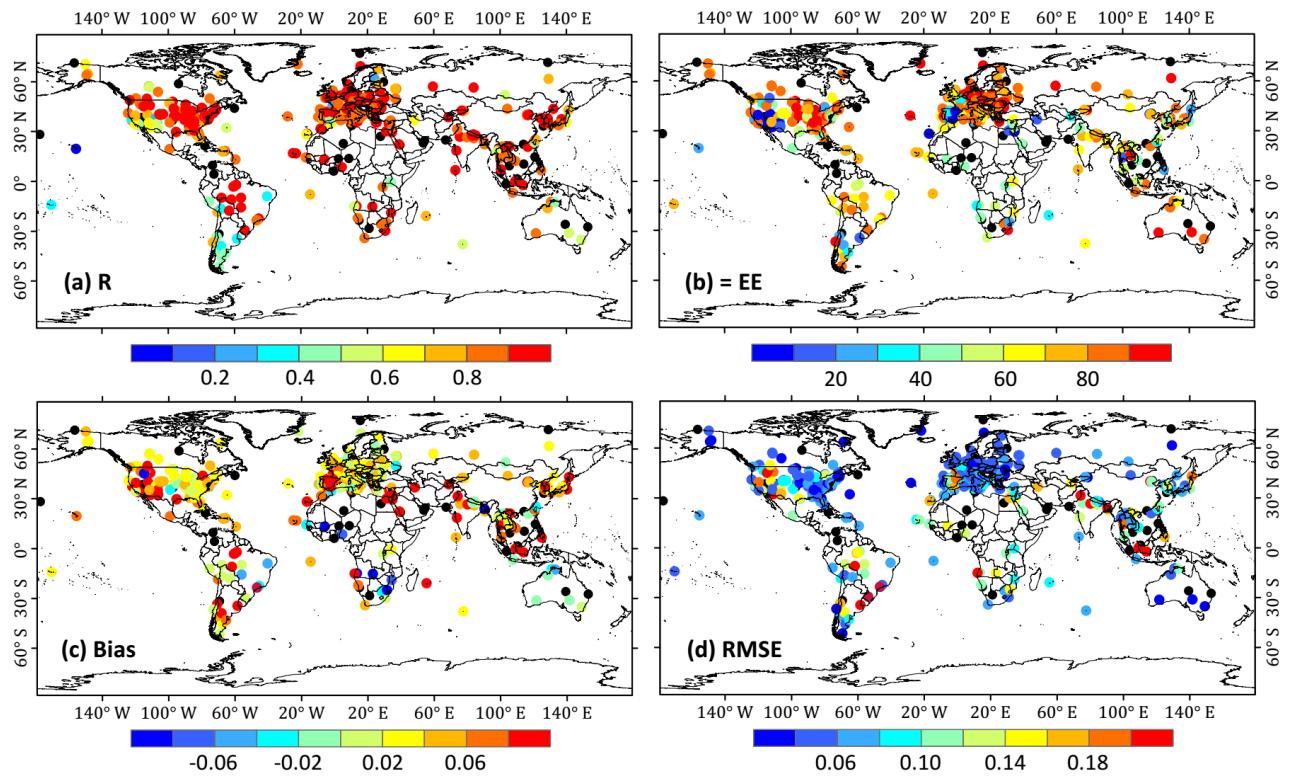

Figure S4. Same as Figure S3 but for data from September, October, and November (SON) of 2013–2017.

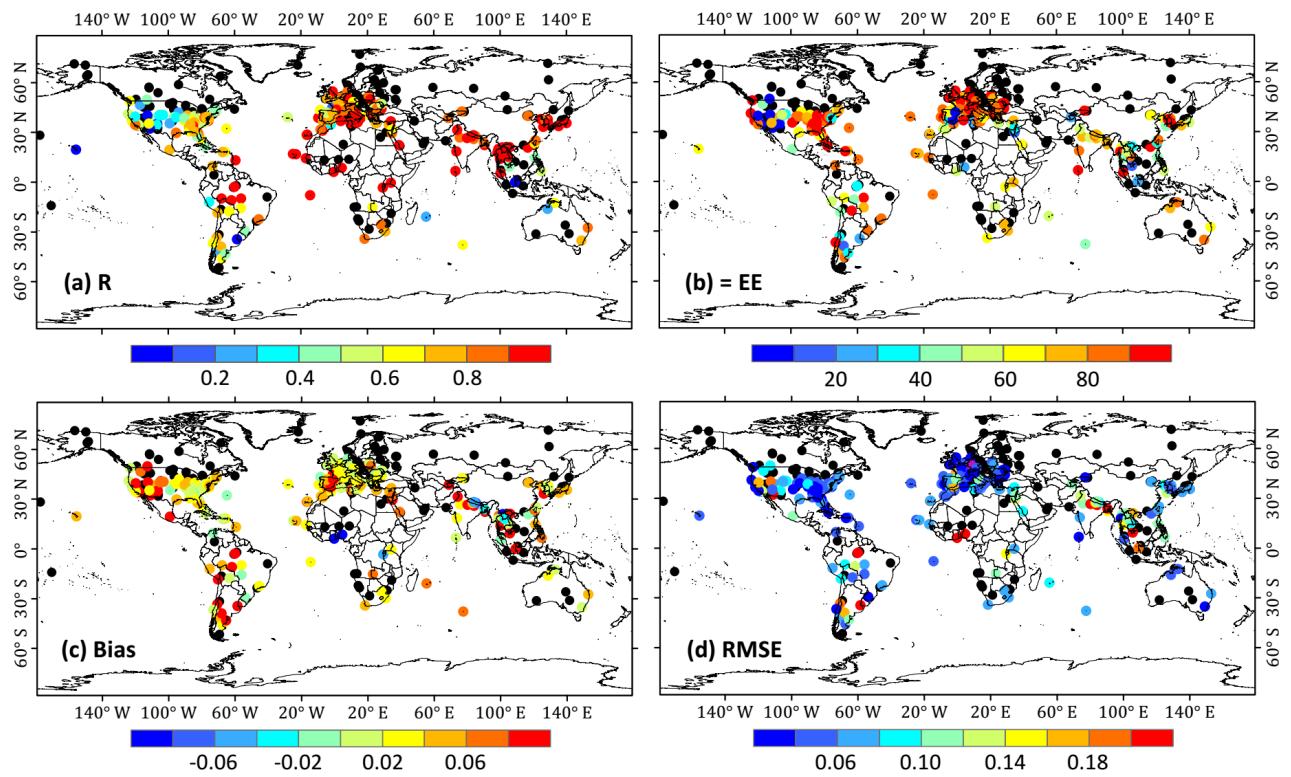

Figure S5. Same as Figure S3 but for data from December, January, and February (DJF) of 2013–2017.

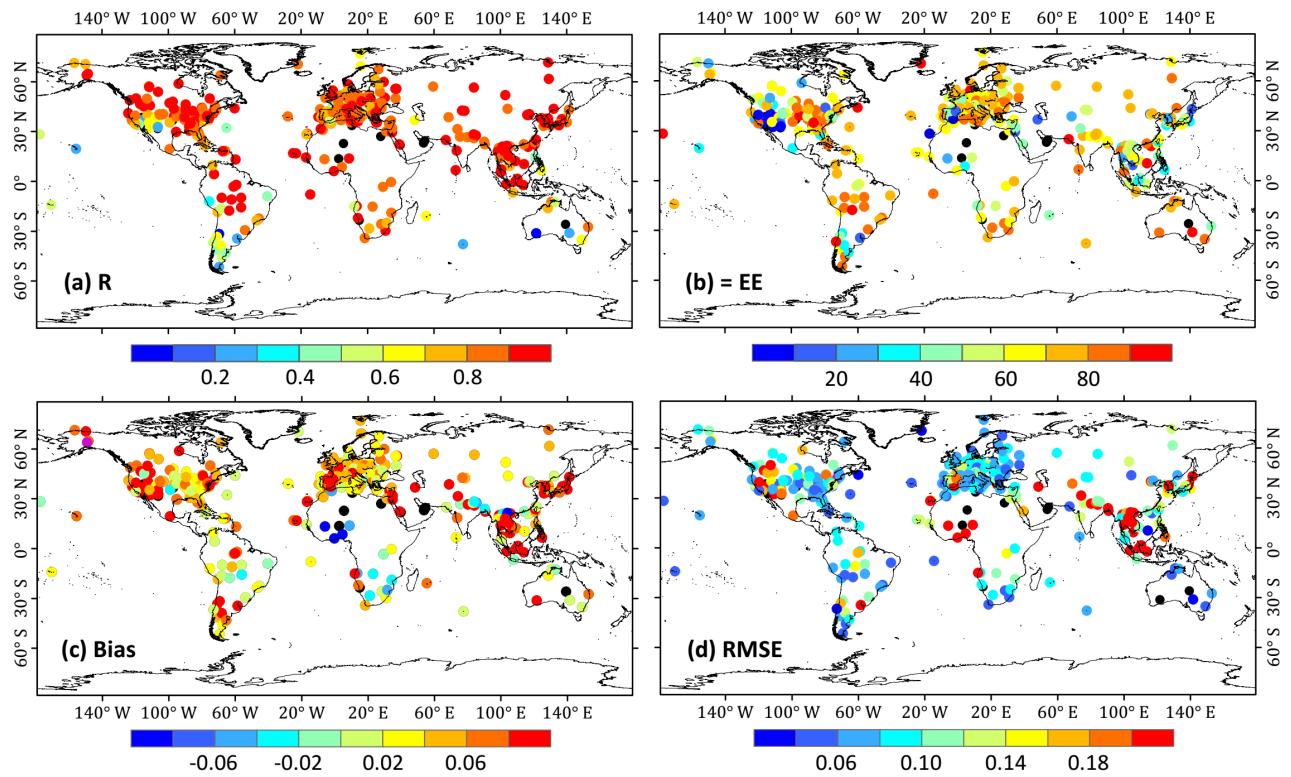

Figure S6. Same as Figure S3 but for MODIS/Terra 3-km all-quality (QA = All) AOD product from 2013 to 2017.

Table S1. Statistics of the accuracy and uncertainty of MOD04_3K best-quality AOD retrievals (QA = 3) as a function of NDVI. Data are from 2013 to 2017. The metrics are number of retrievals (N), correlation coefficient (R), bias, mean absolute error (MAE), root-mean-square error (RMSE), and the percentage of retrievals falling within (= EE), above (> EE), and below (< EE) the expected error envelope (EE).

NDVI	N	R	Bias	MAE	RMSE	RMB	= EE	> EE	< EE
